Suicide of a Superpower Patrick J. Buchanan 2011-10-18 America is disintegrating. The "one Nation under God, indivisible" of the Pledge of Allegiance is passing away. In a few decades, that America will be gone forever. In its place will arise a country unrecognizable to our parents. This is the thrust of Pat Buchanan's Suicide of a Superpower, his most controversial and thought-provoking book to date. Buchanan traces the disintegration to three historic changes: America's loss of her cradle faith, Christianity; the moral, social, and cultural collapse that have followed from that loss; and the slow death of the people who created and ruled the nation. And as our nation disintegrates, our government is failing in its fundamental duties, unable to defend our borders, balance our budgets, or win our wars. How Americans are killing the country they profess to love, and the fate that awaits us if we do not turn around, is what Suicide of a Superpower is all about.

Caravaggio's Eye Clovis Whitfield 2011 This book concentrates on a few crucial years of Caravaggio's development, in order to cast light on what made the artist such a revolutionary figure. It argues that this revolution was one of technique rather than style, and involved the sophisticated use of a camera obscura and so-called 'burning' or parabolic mirrors, exploiting new advances in glassmaking and optics. Because the results Caravaggio obtained by his new methods were so different he created a sensation, although these innovations were rapidly assimilated and the artistic establishment worked successfully to restore their way of doing things, so that the true novelty of his art in the 1590s has been obscured. Clovis Whitfield uses a lifetime of study of the period to discuss not only Caravaggio's technology but also his patronage and cultural context, the Rome of Clement VIII, concentrating particularly on Caravaggio's homosexual patron Cardinal Francesco Maria Del Monte and analysing the taste and role of his other early supporters as well. Whitfield's Caravaggio was the son of a bricklayer, untrained in traditional artistic disciplines, who instead took the dramatic step of painting exactly what he saw with his reproductive aids. Galileo's hypothesis drawn from observation and Caravaggio's novel description of what he saw were, according to Whitfield, parallel attempts to explain features of the many-layered reality that surrounds us. The book features remarkable new photographs and especially details of Caravaggio's paintings and those of his followers and rivals that will dramatically refresh hackneyed perceptions of this crucial figure and his world.

Musimathics, Volume 1 Gareth Loy 2011-08-19 A commonsense, self-contained introduction to the mathematics and physics of music; essential reading for musicians, music engineers, and anyone interested in the intersection of art and science. "Mathematics can be as effortless as humming a tune, if you know the tune," writes Gareth Loy. In Musimathics, Loy teaches us the tune, providing a friendly and spirited tour of the mathematics of music—a commonsense, self-contained introduction for the nonspecialist reader. It is designed for musicians who find their art increasingly mediated by technology, and for anyone who is interested in the intersection of art and science. In Volume 1, Loy presents the materials of music (notes, intervals, and scales); the physical properties of music (frequency, amplitude, duration, and timbre); the perception of music and sound (how we hear); and music composition. Calling himself "a composer seduced into mathematics," Loy provides answers to foundational questions about the mathematics of music accessibly yet rigorously. The examples given are all practical problems in music and audio. Additional material can be found at http://www.musimathics.com.
